SEO está morto...

ADD A CHERRY ON TOP

I·CHERRY

SEO está morto...

... e morre a cada ano desde 1994.

Um pouco de história

1994

April 1994

The Yahoo! Directory launches. Its dominance as a search engine in years to come will make search engine submission a key activity for SEOs.

YAHOO!

At the same time, Webcrawler, the world's first full-text index of the web, is launched.

1995

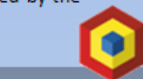

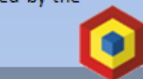

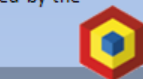

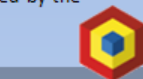

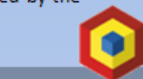

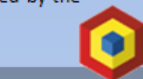

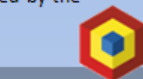

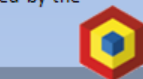

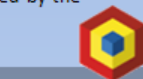

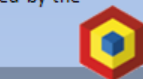

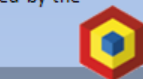

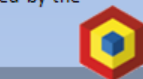

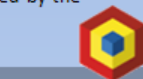

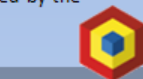

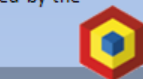

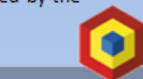

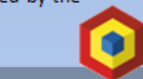

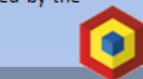

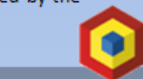

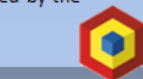

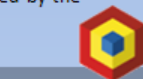

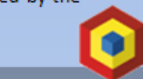

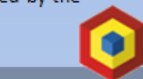

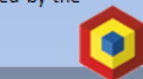

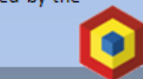

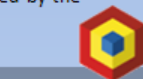

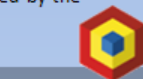

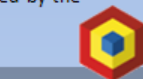

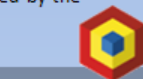

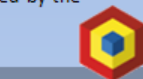

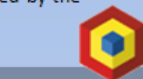

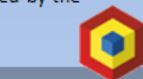

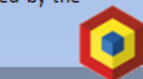

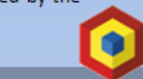

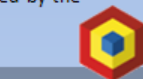

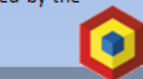

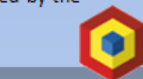

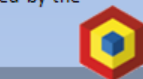

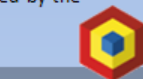

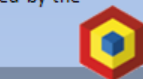

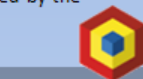

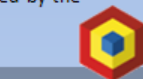

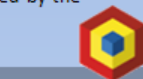

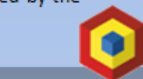

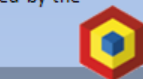

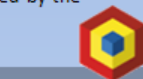

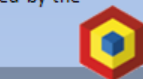

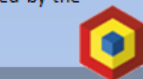

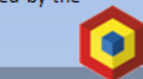

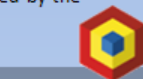

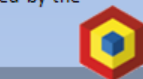

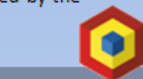

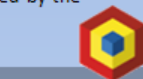

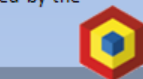

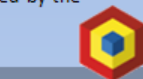

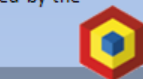

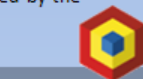

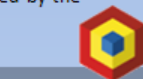

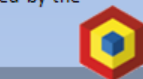

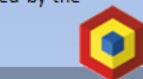

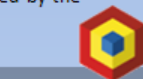

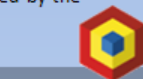

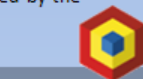

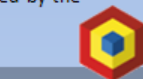

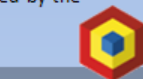

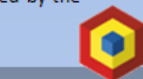

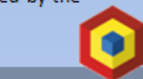

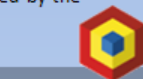

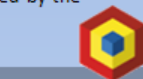

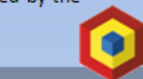

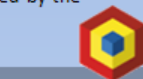

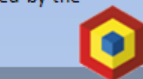

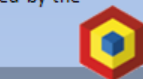

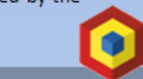

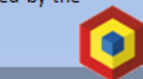

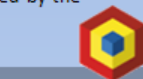

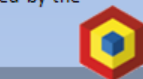

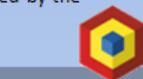

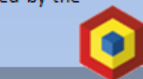

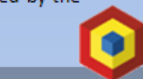

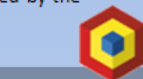

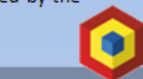

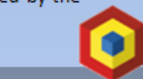

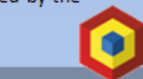

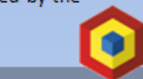

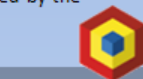

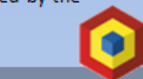

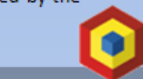

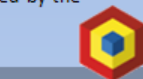

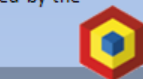

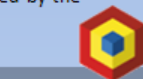

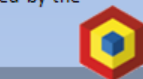

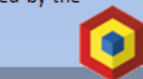

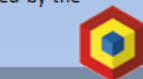

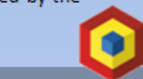

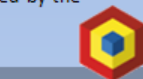

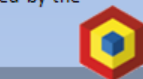

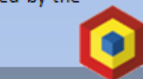

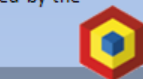

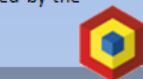

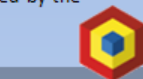

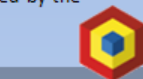

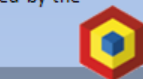

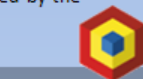

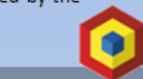

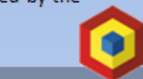

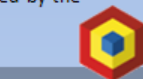

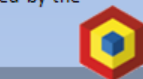

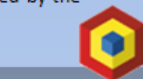

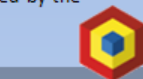

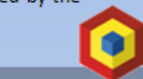

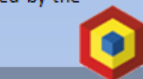

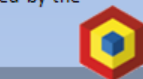

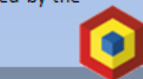

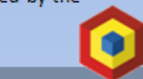

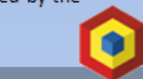

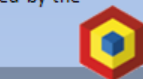

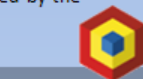

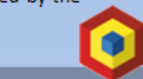

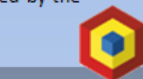

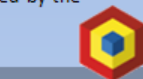

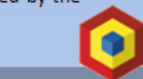

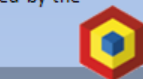

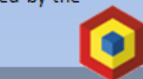

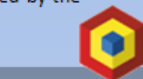

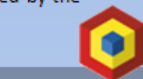

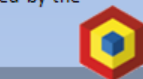

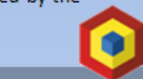

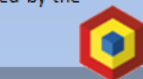

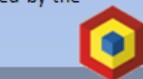

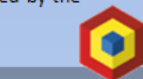

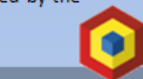

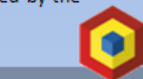

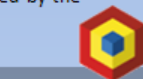

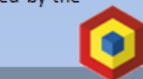

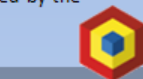

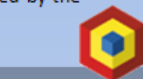

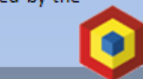

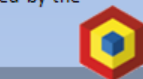

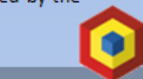

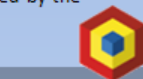

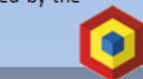

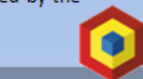

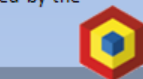

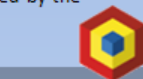

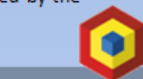

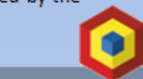

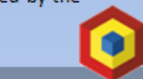

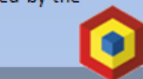

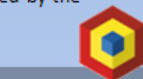

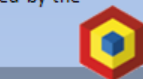

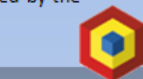

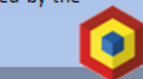

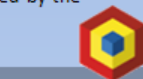

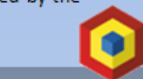

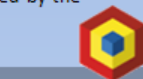

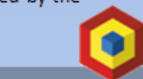

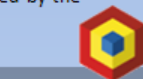

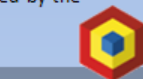

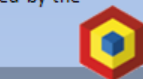

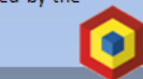

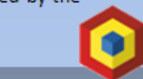

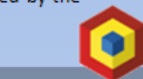

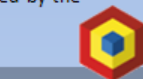

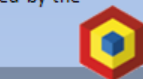

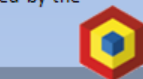

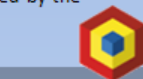

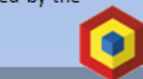

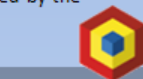

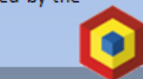

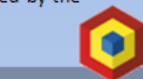

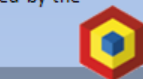

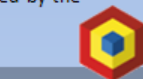

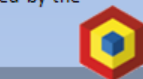

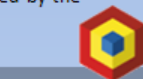

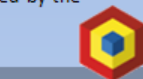

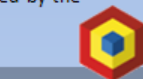

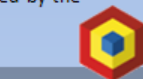

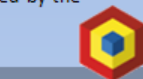

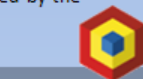

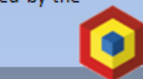

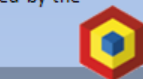

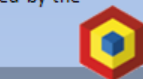

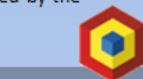

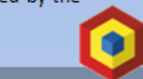

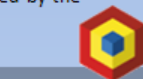

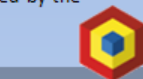

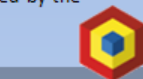

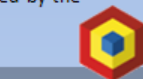

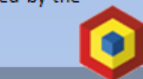

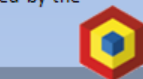

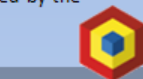

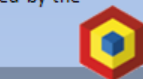

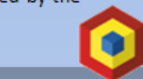

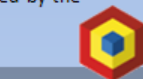

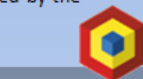

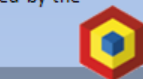

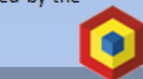

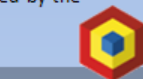

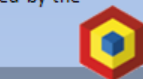

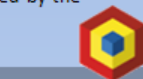

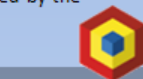

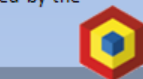

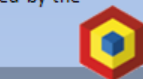

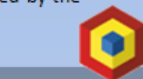

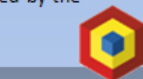

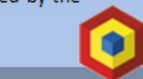

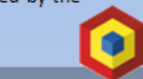

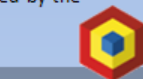

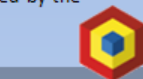

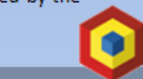

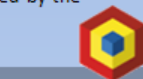

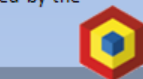

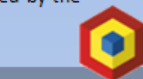

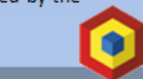

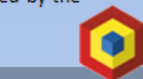

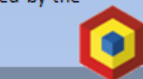

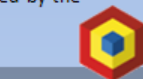

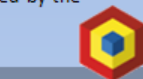

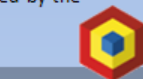

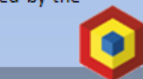

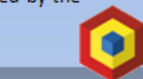

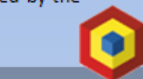

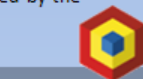

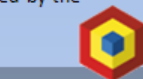

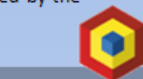

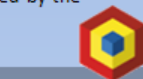

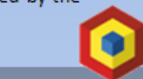

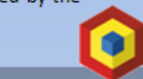

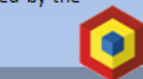

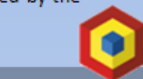

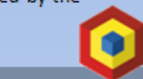

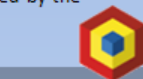

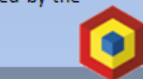

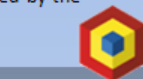

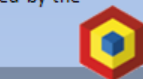

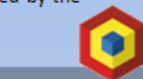

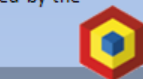

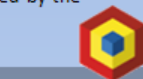

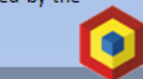

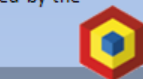

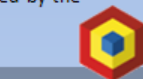

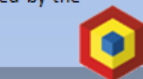

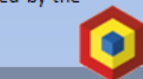

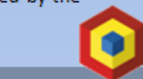

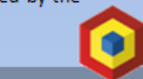

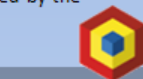

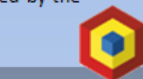

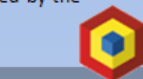

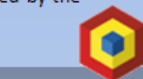

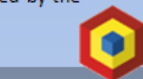

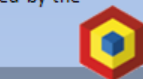

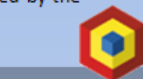

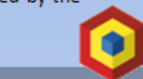

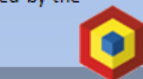

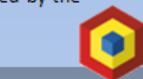

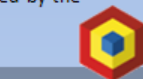

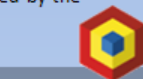

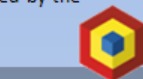

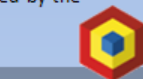

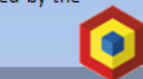

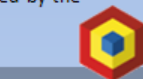

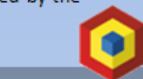

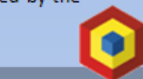

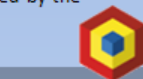

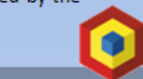

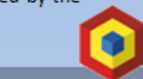

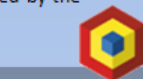

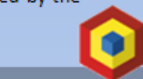

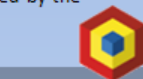

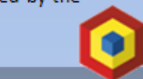

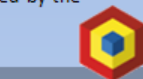

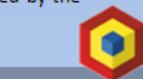

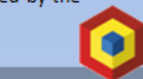

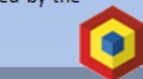

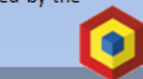

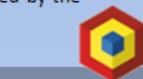

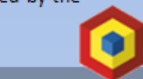

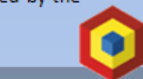

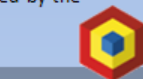

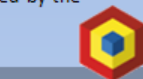

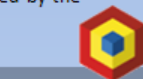

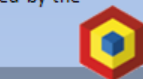

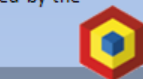

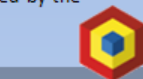

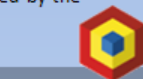

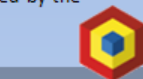

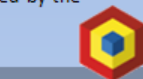

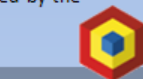

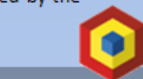

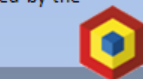

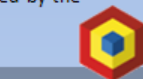

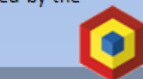

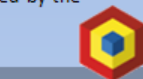

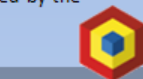

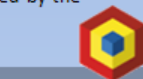

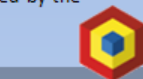

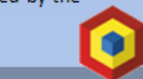

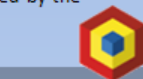

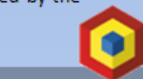

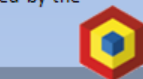

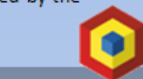

August 1995

Internet Explorer launches, starting the first "browser wars".

September 1995

Hotbot and Looksmart. Hotbot is powered by the Inktomi engine.

2002

August 2002

Bob Massa creates the first paid link network, the "PR Ad Network", which brokers paid links between participating sites.

That September many sites hosted by Massa lose toolbar PR, apparently as punishment for the PR Ad Network. Massa sues Google for this loss but loses the case.

2003

February 2003

Google acquires Blogger. Later this year Wordpress launches. The two services popularise blogging and comment spam becomes a real problem for the engines.

March 2003

Google releases AdSense. This leads to a wave of "Made For AdSense" (MFA) sites that will plague search engine results for years to come.

February 2004

Yahoo! adopts its own algorithm based on Inktomi.

2005

January 2005

The nofollow tag is created with joint support from Google, Yahoo and MSN as a means to combat blog comment spam. Later, SEOs attempt to use the tag in order to optimise site architecture, with disputed success. This becomes known as "PageRank sculpting".

February 2005

Microsoft rebrands MSN as Live Search, with its own algorithm

2006

February 2006

AskJeeves is renamed "Ask".

2007

November 2006

The engines announce joint support for XML sitemaps.

July 2007

Universal Search.

August 2007

Text Link Ads is banned by Google.

2008

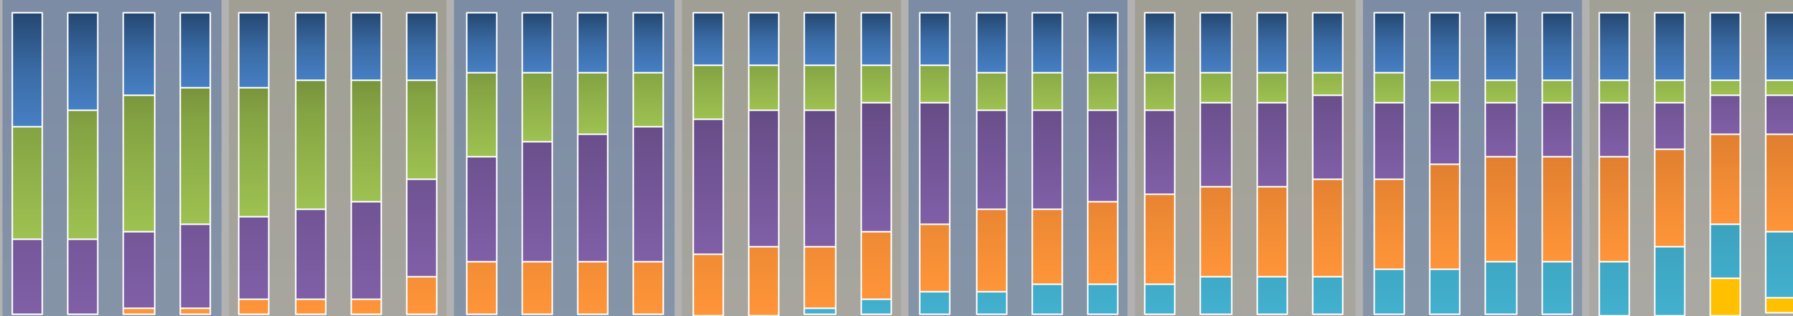

June 2009

Microsoft drops Live Search and releases Bing. Later, talks are finalised with Yahoo! that will see Bing power the Yahoo! search results by the end of 2010.

July 2009

Google tests "Caffeine", an infrastructure update allowing faster indexing.

RELATIVE IMPORTANCE OF FACTORS IN SEO OVER TIME

ON PAGE SEO

PAGERANK

ANCHOR TEXT

DOMAIN AUTHORITY

LINK CONTEXT

USER SIGNALS

February 2002

After a disappointing start, AdWords re-launches as a CPC platform, and rapidly cements itself as the premier paid search platform online.

October 2002

Yahoo! acquires Inktomi, but continues to use Google search results, while MSN continues to use Inktomi as its engine.

September 2003

In response to the ever increasing importance of anchor text, Patrick Gavin launches Text Link Ads, making it easy for anyone to buy links across a wide range of sites in the TLA network.

November 2003

In an unprecedented move, Google makes massive changes to its algorithm to combat web spam, wiping many genuine websites from the SERPs at the same time. The update becomes known as "Florida".

July 2004

SEOs start to talk about the "Google Sandbox".

Digital Point creates the co-op network, a vast communal link farm designed to manipulate anchor text on a colossal scale.

November 2005

In a continuing pattern of releasing major algo updates just before the holiday season, "Jagger" happens. Jagger targets the strategy of sending unsolicited link exchanges and starts a trend that will see anchor text diminish in importance due to its easy manipulation.

Jagger is followed shortly by "Big Daddy", an infrastructure update that allows Google to better process the context of links between sites.

September 2007

Wikipedia has more than 2 million articles. It will demonstrate the importance of domain authority for years to come by ranking for almost everything.

October 2009

Google and Microsoft sign deals with Twitter to gain access to Tweets.

March 2009

Joint support for the new canonical tag.

April 2009

Ask becomes Ask Jeeves. Again.

greenlight

Característica do buscador:

A qualidade do resultado de busca estava na revisão manual de todos os links enviados.

A organização do ranking era feita por lista (às vezes alfabética) e por avaliação humana.

1994 – Yahoo Directory

Técnica de otimização:

Cadastramento dos sites em diretórios para revisão manual

Desenvolvimento de Robôs para cadastramento em milhares de diretórios

Característica do buscador:

O Altavista foi lançado com um índice de páginas muito grande, mostrando que o futuro dos buscadores estaria naqueles que conseguissem desenvolver bons crawlers. O ranking era basicamente definido por elementos on page.

1995 – Altavista

Técnica de otimização:

Cadastramento em diretórios, Otimização on page

1997

Desenvolvimento de softwares de engenharia reversa para quebrar algoritmos que rankeavam baseados em fatores on page.

Nasce o black hat.

Popularização do cloaking (para proteção dos sites contra outros SEOs)

Característica do buscador:

Vários analistas começam a mencionar que os algoritmos dos buscadores serão baseados em citações de links. Google é lançado e o PageRank se mostra muito eficiente. Altavista é bombardeado com Spam.

1998 – Google

Técnica de otimização:

Cadastramento em diretórios, Otimização on page, link building.

Qualquer página com bons rankings no Altavista é copiada. Nasce o conceito de conteúdo duplicado e de doorway pages.

Buscadores começam a penalizar sites de agências que fazem SEO. Nasce o negative SEO.

Característica do buscador:

Google se consolida como o modelo de buscador a ser seguido, com algoritmo combinando fatores onpage e offpage. Yahoo muda a plataforma de busca para Google. Google lança o Google Toolbar.

2000 – Google

Técnica de otimização:

Cadastramento em diretórios, Otimização on page, link building (já com anchor text e relevância de domínios sendo considerados).

Com o Google Toolbar, o mercado de link building se profissionaliza, pois agora é possível identificar sites “chancelados” pelo Google.

Característica do buscador:

Google compra o Blogger, lança o AdSense.

Lança o Florida Update para combater spam, principalmente de elementos on-page.

Cria o supplemental index, sites e páginas novas passam por esse índice antes de irem para o índice principal.

2003 – Google

Técnica de otimização:

Cadastramento em diretórios, Otimização on page, link building, comentários em blogs.

Text Link Ads é lançado (é possível comprar links com anchor text específico em diversos sites)

Característica do buscador:

Buscadores lançam a tag “nofollow” para combater spam em comentários de blogs.

Google lança o Jagger update para combater link spam (link farm, reciprocal linking, etc). Em 2006 Google compra o Youtube e buscadores lançam suporte a sitemaps.xml

2005 – Google

Técnica de otimização:

Cadastramento em diretórios, Otimização on page, link building (links em redes sociais), PageRank Sculpting.

Sitemap.xml

Característica do buscador:

Google, Yahoo e Microsoft live começam a incluir conteúdos multimídia nos resultados de busca (universal/blended search)

Wikipedia já conta com 2 milhões de artigos

Em 2008 Google lança o Google Suggest (hoje Google instant)

2007 – Google

Técnica de otimização:

Cadastramento em diretórios, Otimização on page, link building, PageRank Sculpting, Keyword research usando Google Suggest.

Otimização de sitelinks.

Text Link Ads é banido do Google.

Característica do buscador:

Google anuncia que PageRank sculpting com “nofollow” não funciona. Buscadores lançam a “canonical tag” para combater conteúdo duplicado. Microsoft lança o Bing. Google testa o caffeine pela primeira vez e lança o real time search.

2009 – Google

Técnica de otimização:

Cadastramento em diretórios, Otimização on page, link building, Keyword research usando Google Suggest.

Otimização de código para carregamento mais rápido das páginas.

Eliminação de páginas duplicadas com rel=canonical.

Característica do buscador:

Google lança o Caffeine em definitivo.

Google lança o Mayday para combater sites com baixa qualidade de conteúdo (especialmente scrapers).

Google lança os Instant previews. Google e Bing confirmam a utilização de sinais de redes sociais como fatores de ranking.

2010 – Google

Técnica de otimização:

Cadastramento em diretórios, Otimização on page, link building, Keyword research usando Google Instant, Estratégia de Conteúdo, social media.

Nasce o mercado de “curtir”, links em tweets, favoritar no Google.

Exact match no anchor text perde força.

Otimização do tempo de carregamento da página

Característica do buscador:

Google lança o Panda update, novamente com foco em sites de baixa qualidade.

Google lança o +1.

Buscadores lançam o Schema.org

Google lança o rel=next e rel=prev pra resolver problemas de paginação.

2011 – Google

Técnica de otimização:

Cadastramento em diretórios, Otimização on page, link building, Keyword research usando Google Instant, Estratégia de Conteúdo, social media

Integração do Webmaster Tools com o Google Analytics (not provided)

Otimização do tempo de carregamento da página

Característica do buscador:

Google anuncia diversas atualizações e pode penalizar sites que estejam “over” otimizados.

Atualização para penalizar sites com muitos anúncios acima da dobra do scroll.

Google lança o Penguin.

2012 – Google

Técnica de otimização:

Cadastramento em diretórios, Otimização on page, link building, Keyword research usando Google Instant, Estratégia de Conteúdo, social media.

Integração do Webmaster Tools com o Google Analytics (not provided).

Otimização do tempo de carregamento da página

The New York Times

Using Menu Psychology to Entice Diners

By SARAH KERSHAW

Published: December 22, 2009

CHICKEN liver is what the restaurateur Danny Meyer calls a torpedo.

[Enlarge This Image](#)

Dave Plunkert

Left to its own devices, it may be unappetizing and unpopular, but when paired with what he calls an enhancer — applewood smoked bacon in the case of the chicken liver on the menu at Tabla, Mr. Meyer's Indian fusion restaurant in the Flatiron District — it not only excites the taste buds but goes to work on the mind.

And the name of the Tabla appetizer, Boodie's Chicken Liver Masala, draws even deeper from the growing field of menu psychology because Boodie is the mother of Floyd Cardoz, Tabla's executive chef. People like the names of mothers, grandmothers and other relatives on their menus, and research shows they are much more likely to buy, say,

PR

Link Building

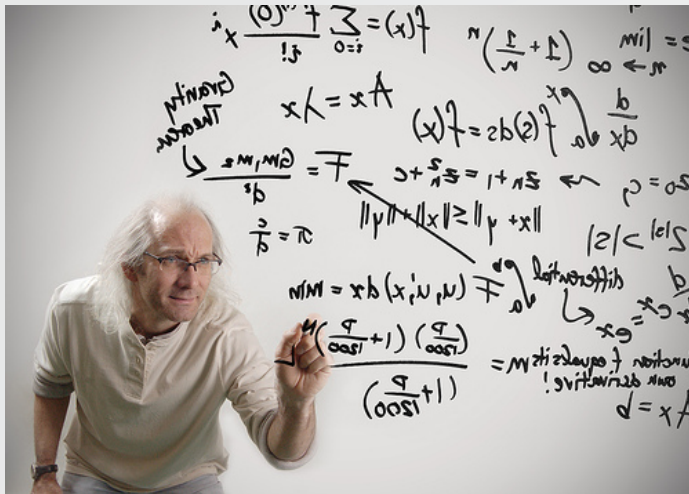

Boas práticas:

- Construção de reputação é mais importante que apenas links.
- Se um link gera tráfego ele é um bom link.
- Crescimento de links comparado com o crescimento de links a partir de redes sociais.
