I've seen the

FUTURE

It's in my

BROWSER

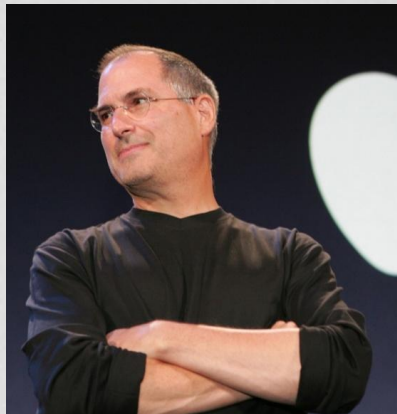

The Web has not seen this level of transformation, this level of acceleration, in the past ten years. We're betting big on HTML5

Vic Gundotra
VP of Engineering, Google

The world is moving to HTML5.

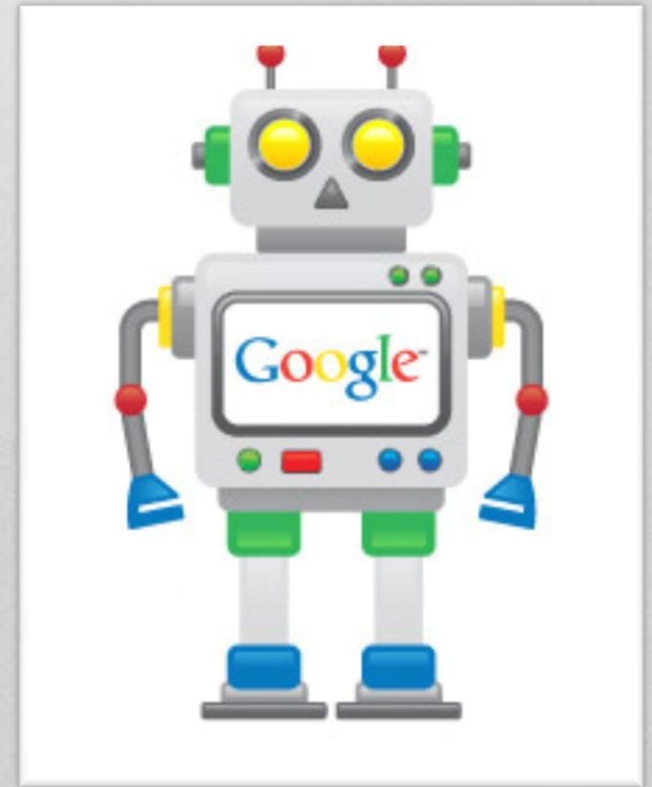

Steve Jobs
Apple

If you want to do something universal, there is no question, the world is going HTML5. That is clear...The world is just pushing down this HTML5 path and so are we.

Steve Ballmer
CEO Microsoft

E como o
Googlebot

tem lidado com isso?

In general, we work hard to understand as much of the web as possible, but I have a feeling that HTML5 markup is not yet as widely in use (and in use correctly) that it would make sense for us to use it as a means of understanding content better. As HTML5 gains in popularity and as we recognize specific markup elements that provide value to our indexing system, this is likely to change, but at the moment I would not assume that you would have an advantage by using HTML5 instead of older variants.

John Mueller
Webmasters Trends Analyst, Google

Mas SEO é bem mais do que posicionamento

Semantics

Performance

A web é texto, e todo texto
deve ter significado.

```
<div id="header">
```

```
<div id="main-content">
```

```
<div id="sidebar">
```

```
<div id="footer">
```

Atualmente, usamos elementos *<div>* para organizar e segmentar de uma página web. Não temos uma organização semântica que mostre com exatidão qual bloco de conteúdo é referente a exatamente qual seção do site.

```
<div id="top"></div>
<div id="main">
  <div class="article">
    <h2>Article title</h2>
    <p>The article</p>
  </div>
</div>
<div id="sidebar"></div>
<div id="footer"></div>
```

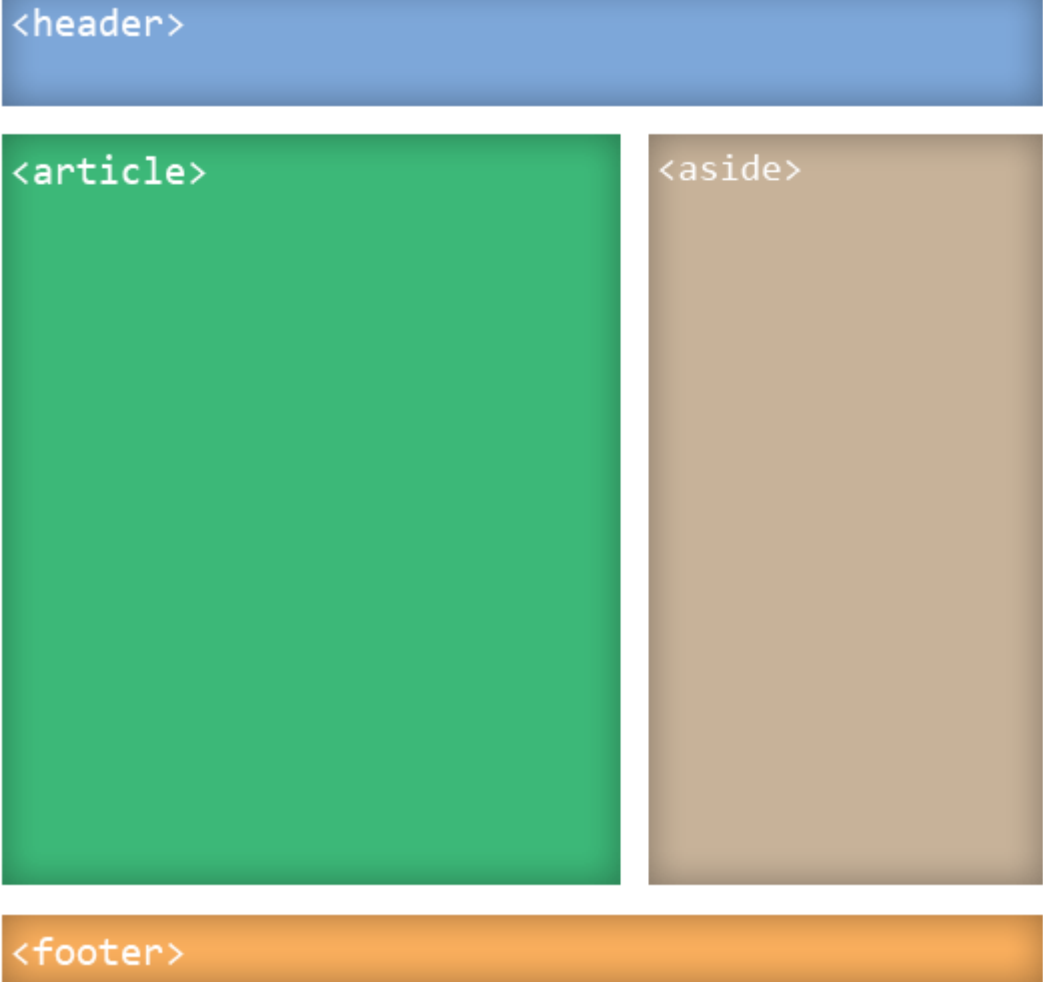

What you see

```
<div></div>
<div>
  <div>
    <h2>Article title</h2>
    <p>The article</p>
  </div>
</div>
<div></div>
<div></div>
```

*What your
browser sees*

The diagram illustrates the structure of an HTML5 document. It consists of four main colored rectangular blocks: a blue header block at the top, a large green article block on the left, a tan aside block on the right, and an orange footer block at the bottom. The blocks are arranged in a container with a white border. The text labels for each block are placed in the top-left corner of their respective blocks.

`<header>`

`<article>`

`<aside>`

`<footer>`

Uma vez o HTML5 sendo mais amplamente adotado, mecanismos de busca podem usar esses novos elementos para os ajudar a encontrar elementos da página de seu interesse.

Microdata e HTML5

Microdados são um subconjunto de informações em um documento que tem um significado para as máquinas, robôs, assim como tem um significado para uma pessoa lendo o documento. Isto é, fornecer metadados de uma forma que pode ser usada por uma máquina e permitir que os dados sejam processados e exibidos de uma forma que atenda melhor o usuário.

Exemplo prático:

The screenshot shows the homepage of 'Tudo para WordPress'. The header includes a logo with a stylized 'W' and the text 'Tudo para WordPress'. To the right of the logo, it says 'Plugins, Temas, dicas de WordPress e muito mais para você que busca informação sobre este excelente CMS!'. Below the header is a navigation bar with links: INICIAL, CURSOS, SEO (highlighted), TEMAS WORDPRESS, TEMAS PREMIUM, DICAS, and PLUGINS.

The main content area shows a breadcrumb trail: [Inicial](#) » [SEO](#) » Qual impacto o HTML 5 pode ter em SEO?. Below this is the article title 'Qual impacto o HTML 5 pode ter em SEO?' and the publication date 'Publicado em 17/02/2012 às 11h29 por [Guga Alves](#)'. There are social sharing buttons for Twitter (0), Google+ (6), Curtir (2), and Pin it.

The article text begins with: 'Embora ainda seja um trabalho em progresso, o HTML5 é a próxima grande revisão do padrão HTML. O HTML, que é a linguagem de marcação que permite estruturar e apresentar nosso conteúdo web, parece ser desenvolvido com o SEO sendo um dos fatores primários nos esforços deste novo padrão. HTML dá ao mecanismos de busca o contexto necessário de que precisam para entender o que está contido em uma página web. Como pode o HTML5 mudar a maneira como abordamos SEO? Quais são os possíveis impactos do HTML5 em algoritmos dos motores de busca? É o que tentaremos responder neste artigo.'

The HTML5 logo is displayed on the right side of the article text. It features the word 'HTML' in black above a large, stylized orange '5' with a white 'H' inside it.

Make the Web Faster

High performance web sites lead to higher visitor engagement, retention and conversions

Analyze and optimize your website with PageSpeed tools

Analyze with PageSpeed Insights

Get your PageSpeed score and use PageSpeed suggestions to make your web site faster through our online tool.

Analyze with Chrome & Firefox

Analyze your website directly in Chrome or Firefox and use PageSpeed suggestions to make your web site faster.

Speed up with PageSpeed Service

Let us optimize your web site and serve it from Google infrastructure for maximum performance.

Speed up with mod_pagespeed Apache module

Run mod_pagespeed on your server to automatically rewrite and optimize resources on your web site.

Leverage Google's infrastructure

Speed up your browsing with Google DNS

Leverage Google's Public DNS to improve security and speed of your browsing experience.

Offload popular open-source libraries

Speed up your site by using Google's infrastructure to serve the most popular, open-source JavaScript libraries.

Using site speed in web search ranking

Friday, April 09, 2010 at 11:00 AM

Webmaster Level: All

You may have heard that here at Google we're obsessed with speed, in [our products](#) and [on the web](#). As part of that effort, today we're including a new signal in our search ranking algorithms: site speed. Site speed reflects how quickly a website responds to web requests.

Speeding up websites is important — not just to site owners, but to all Internet users. Faster sites create happy users and we've seen in our [internal studies](#) that when a site responds slowly, visitors spend less time there. But faster sites don't just improve user experience; recent data shows that improving site speed also [reduces operating costs](#). Like us, our users place a lot of value in speed — that's why we've decided to take site speed into account in our search rankings. We use a variety of sources to determine the speed of a site relative to other sites.

If you are a site owner, webmaster or a web author, here are some free tools to help you evaluate the speed of your site:

- [Page Speed](#), an open source Firefox/Firebug add-on that evaluates the pages and gives suggestions for improvement.
- [YSlow](#), a free tool from Yahoo! that suggests ways to improve website performance.
- [WebPagetest](#) shows a waterfall view of your pages' load performance and a checklist.
- In [Webmaster Tools](#), Labs > Site Performance shows the speed of your pages as experienced by users around the world as in the chart below. We've also

For years we built web apps that far outpaced the capabilities of the browsers they ran in. Just as the browsers were catching up HTML5 came on the scene - video and audio, canvas, SVG, app cache, localStorage, @font-face,

110 "gostei", 2 "não gostei"

<http://www.slideshare.net/souders/high-performance-html5-sf-html5-ug>

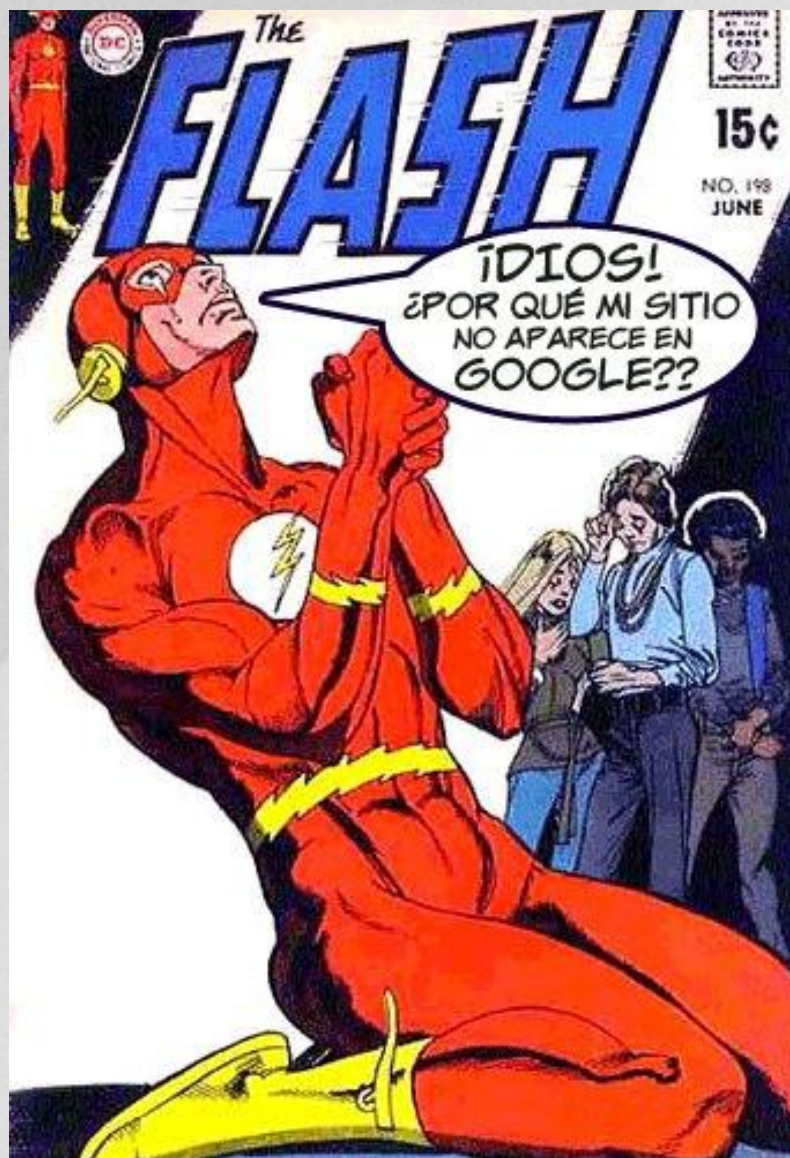

E lembre-se dos dispositivos portáteis!

Resumindo:

- Diversas melhorias na usabilidade e experiência do usuário.
- Novas tags que ajudam a classificar o conteúdo de forma semântica.
- Ótimas melhorias para manipulação de mídias (áudio e vídeo).
- Precisa comparar com Flash e Silverlight? **EPIC WIN!**
- SEO-friendly se pensarmos rastreamento e indexação de site.
- Uso crescente em aplicativos móveis e jogos.
